To Whom It May Concern,

I am writing to you because banning the Hikvision line of camera system in the United States would greatly affect my business and income. As well as the hundreds of customers of mine that would no longer have the support or the reliable equipment that over the years they have come to greatly appreciate. This would make no sense to ban the product completely. I do understand that it has been banned from government facilities. However, the reasons even there are not valid. However, my company complied with the ruling even though it had a serious impact on my business. But a complete ban would be devastating. I am pleading with the board members to please reconsider this ruling and for the better good VETO the "ET Docket No. 21-232". Banning this product would leave hundreds of my own customers vulnerable with their businesses. As well as thousands more. If this were to be banned it would cost the consumer excess dollars to ultimately have to replace the system with a substandard system. I know my systems and the Hikvision System is a superior system in the industry. The excellent support, reliability, the ease of use, the cost, the functionality as well as the level of security of the system are unmatched. This is an amazing system and should not be allowed to be banned from the United States market.

Regards,

Doug Haynes
